It allows players to do what they can't in real life – let off some steam and shoot away some zombies without restrictions. The best part is that the player can choose any type of gun to take down his enemies. The worst part is choosing which gun to use. Of all the weapons Resident Evil 5 can be good and bad ones, but there are also great ones. Here are the 10 best weapons resident evil 5, ranked. 10 SIG P226 The first handgun on this list is the Sig P226. It has a damage of 480, reloaded in 1.62 seconds, and a power of 16 rounds when fully upgraded. This is the highest firepower of all handguns. Unfortunately, it has the lowest power and lowest reload speed, which is why it comes with the number ten, but, overall, it's the weapon that won't let you down. The 9 M93R Second handgun is an M93R that contains damage of 400, reload 1.36 seconds, 30-round power, and 3-shot burst capability when fully upgraded. The Beretta M93R has the second highest firepower of all handguns, has a decent reload speed, and the fastest fire speed. The only downside is that it costs quite a penny. 8 M3 Next on the list is a shotgun, especially the M3 shotgun. Fully upgraded, the M3 shotgun has a damage of 900, reloaded in 2.7 seconds, and 10 rounds available and known as the best shotgun in its class because of its power. It has the highest firepower in its class and has a wide attack. With great force also comes great consequences. This shotgun lacks an upgrade and has little power. Using this weapon against the close, one goal is also collapse, because it works better with crowd control. 7 H & amp; 4H The K MP5 MP5 is an all-around solid choice weapon. The MP5 slot machine has a fault of 120, reload 1.2 seconds, and 150-round power. This gun is accurate and has a high piercing that makes it good against those enemies built with armor. It is also useful against shields. The 6 S75 Comes with the number six is the S75, an impressive sniper rifle and one of the first introduced by Resident Evil 5. It's a fault in 2000, a reload time of 3.3 seconds, and 50-round power after it has been fully upgraded. The S75 is not in high semi-automatic firing mode, and it also forces players to use bolt action for each shot. However, it makes it worth having high power and high firepower, as well as being the most stable rifle. It is the highest stopping power of all guns. The 5 SIG 556 SIG 556 assault rifle features the fastest reload of all machine guns and why it comes off the top five of this list. Fully upgraded, it has a firepower of 180, a reload speed of 1.42 seconds and a power of 80. While other machine guns have a larger range of power and power, the SIG 556's reload speed is unbeatable and has the second highest level of fire. 4 H& amp;K PSG-1 Although the aforementioned S75 rifle can have great firepower and Dragunov may be the strongest rifle, the H& amp; amp; The K PSG-1 rifle has the fastest reload time and the second highest firepower, allowing it to put in more shots. In addition, it is the most powerful zoom for the scope and wavers least while scoping. PSG-1 has 1,200 firepower, a reload speed of 1.37, a 15-power round, and an increase in scope of 2.3 Hydra Other shotgun worth noting is Hydra. It has a damage of 550, reload 3.3 seconds, and has 10 rounds. Overall, this shotgun is better than the M3, and one of the best to choose. This is a large attack range that is able to cause damage over near distances and short distances. Once upgraded to the offensive range, it can triple or quadruple its damage, but the M3 is not an upgrade at all. Reload speed, however, is kind of low, and that can inhibit Hydra, but only slightly. How you can get Hydra is to fully improve the Ithaca M37. 2 Gatling Gun Comes with number two at Gatling Gun. This weapon causes 450 damage to the bullet, and when it reaches its full potential, the damage can be gradually build up. As a result, dealing with massive damage. In addition, it comes with a large ammo box so that the player can protect from wandering bullets or bullets aimed at the back. It even has unlimited ammo. Just make sure you don't wear the box while using Hydra because it inhibits the purpose of the ability. 1 Lightning Hawk Lightning Hawk has a damage of 3000, reload 1.36, and 8-round power and one of the best magnums, and weapons, resident Evil 5. While the M500 has the highest firepower, the Lightning Hawk can fit twice as many shots as the M500 as it reloads use via logs. The best part is it doesn't cost the arm and leg to improve! Discussion starter • #1 • December 7, 2017 Hello, I talked to a guy who sells his Sig 556R second generation rifle for about \$950. He said that first-generation models with serial numbers below 2,000 had some problems, but second-generation series rifles run great. My number one priority for this gun is that it is reliable. He said that 556xi-R rifles have had some problems, so I should buy a 556R. My questions all of you: 1. is it true that xi Sig 556 xi and xi-r guns have had problems? 2. if so, what kind of problems? 3. did Sig solve the problems and fix them later in the series number series, was the fix really working? 4. if Sig solved the problems, what serial number do the advanced models have? 5. He said something about changing barrels that made them problems, so fixed barrel guns in the old 556R are better, is that correct? 6. Will Sig ever carry short barreled 556R pistols with PSB Pistol Stabilizing braces? Are they going to do them with psb for xi-R 556? 7. Is the \$950 fair price used in the 556R with several hundred rounds through it? Thanks in advance to all that answers with feedback on any of these questions . Discussion Starter • #2 • December 15, 2017 Sig 556R price ? Can any of you please at least tell me if the use of the Sig 556R second generation rifle is worth about \$1,000 or is the newer Sig 556 xi-R more reliable? My number one priority in this rifle purchase is reliability. Thanks in advance for any help. . As far as the SIG 556R 2nd generation rifle is concerned – the price/reliability is both arguing points – the rifle is now, for the most part, an orphan. Whenever SIG USA is concerned, I'd just mess with my legacy of guns, or AR – model rifles that use common parts available from other manufacturers. . Discussion starter • #4 • December 16, 2017 Are so much of you that there is any idea please let me know how many thousands of rounds I should expect to get from sig 556R second generation before I start taking a part break for me? I'm just talking at all, what is the pretty average range to expect? Do you all think we're talking 3,000 rounds, 5,000 rounds, 10,000 rounds or more ??? The previous owner says he ran 1,500 rounds through it without any problems. Does Sig just completely stop selling these 556R parts so if, for example, the bolt fails, the rifle just gets the paper weight? Thanks again in advance for any feedback . I can't tell you anything about round numbers, but I'd rather be late for production of the 556R than the XI. The questions were ironed out by the time they came out; XI has never put that long... who knows. Sent from my iPhone using Tapatalk . Also, there's another site that was pretty fond of the 556R at the moment, some users still have. It may be worth your time to look at some of their older threads. Sent from my iPhone using Tapatalk . Also #2, people often say that the 556 series are orphaned, abandoned, etc. by Sig. I would like to know how they could match that with their Lifetime Guarantee. What was the first-hand experience? I've heard of other manufacturers replacing the series from manufacturing a firearm to more of the current model if they couldn't fix it, but haven't heard anything that includes Sig and the 556 series. Sent from my iPhone using Tapatalk . I purchased a 556xi R new about 1100 last year. hasn't been a problem from mine so far. I was ***** myself marked the price up to 900 months later in the summer. It's the last one. Sent from my iPhone using Tapatalk Pro . You should check out the 556 forum. I found someone who would buy my Swiss stock there. Sent from my iPhone using Tapatalk Pro Pro
